

a release means (150, 151) releasing the reproduction of non-individual information on the terminal device, characterised by

a recording means (170) provided outside of the terminal device for recording data for a terminal device in accordance with releases.

3. (AMENDED) System according to claim 1, characterised in that the terminal device is a mobile telephone (100).

4. (AMENDED) System according to claim 1, characterised in that the release means is operable by the user of the terminal device.

5. (AMENDED) System according to claim 1, characterised in that the terminal device comprises a confirmation means (103, 104) operable by the user for confirming the reception of the non-individual information.

7. (AMENDED) System according to claim 1, characterised in that the non-individual information is acoustic and/or optical information, particularly advertisements.

10. (AMENDED) Method according to claim 8, characterised in that the output of the non-individual information is effected upon operation of the terminal device.

11. (AMENDED) Method according to claim 8, characterised in that an operation of the terminal device is only possible after the confirmation of the non-individual information.

A2
Concl

12. (AMENDED) Method according to claim 11, characterised in that the confirmation influences the accounting for the terminal device.

A2

16. (AMENDED) System according to claim 13, characterised by a confirmation means (203, 204) in the second telecommunications device by which a confirmation may be transmitted upon data transfer, and by an accounting means (240) which generates a credit note (241) associated with the first telecommunications device and a debit note (242) associated with the second telecommunications device upon confirmation.

A4

18. (AMENDED) System according to claim 16, characterised in that a confirmation influences the invoice for telecommunications services.

19. (AMENDED) System according to claim 13, characterised in that the second telecommunications device is a mobile telephone (200).

A5
22. (AMENDED) Method according to claim 20, characterised in that data relating to a plurality of payment processes are collected and transmitted to the accounting means together.

A6
25. (AMENDED) System according to claim 23, characterised in that the diagnostic device (306, 307) and the telecommunications device (300) are integrated and comprise a data processing means for processing the data obtained by the diagnostic device.

27. (AMENDED) Integrated diagnostic and telecommunications device for the use in a system according to claim 25.

A7
28. (AMENDED) Gambling system, characterised by
an administration means (400, 410) connected to a telecommunications system (110),
a telecommunications device (100) capable of transmitting data to the administration means for inputting bets or for purchasing tickets and
a payment system according to claim 13, the cost detection facility (220) being assigned to the administration means.

30. (AMENDED) System according to claim 28, characterised by a transmission means for transmitting the results of the game of chance to the telecommunications device.

31. (NEW) System according to claim 2, characterised in that the terminal device is a mobile telephone (100).

32. (NEW) System according to claim 2, characterised in that the release means is operable by the user of the terminal device.

33. (NEW) System according to claim 2, characterised in that the terminal device comprises a confirmation means (103, 104) operable by the user for confirming the reception of the non-individual information.

34. (NEW) System according to claim 33, characterised in that the confirmation is transmitted by the terminal device.

35. (NEW) System according to claim 34, characterised in that the non-individual information is acoustic and/or optical information, particularly advertisements.
